Tip Sheet: Adding Navigator Bands to IView for Blood Transfusion Documentation

To properly document blood transfusions, you must first add the appropriate Navigator Band(s) in IView.
(*Navigator Bands are the section headers used in IView for documentation purposes.*)

Note: This documentation process will be used going forward for all blood transfusions.

Step-by-Step Instructions

1. Open IView for the patient.

2. In the toolbar, click View.

3. Select Layout.

4. Click Navigator Bands.

5. From the "Available Document Types" list, select the necessary bands:

   - ED Lines – Devices – Procedures *(for ED documentation)*
   - Periop Lines – Devices *(for Inpatient documentation)*

6. Click the arrow in the center to move the selected items to Current Document Types.

7. Click OK.

⚠️ A pop-up message will appear reminding you to save by closing the patient's chart (do not exit Cerner entirely).

8. Reopen the patient's chart and return to IView.
   You will now see the newly added Navigator Band(s) available for documentation.
